

2nd July 2008 'Chemistry at Work' University of Teesside
sponsored by the Royal Society of Chemistry

Presentation title: Hospital Diagnostic Clinical Chemistry

This presentation was given by Teesside Hospital

This presentation was interesting because we found out how chemistry is used to test urine for glucose, protein, blood and hormones. These tests are used to diagnose kidney disease, infections or diabetes.

The 'Chemistry at Work' day was an interesting experience because it made me realise how chemistry can really help people. I learnt a lot about urine!

Thank you for the day.

Louise Burgon, St Michael's RC School, Billingham.
