

3rd July 2008 'Chemistry at Work' University of Teesside
Sponsored by the Royal Society of Chemistry

Presentation title: Blood, sweat and tears

This presentation was given by Teesside Hospital Pathology Department.

This presentation was interesting because we found out about how different types of urine and how this was used for diagnosis by the Egyptians.

The photograph above shows the how urine changes colour if you are ill.

The 'Chemistry at Work' day was a useful experience because it has given me an insight into the different types of jobs that are available in the National Health Service.

This session was very well presented although I think it is strange to be so interested in wee.

Scott McClean, St Michael's RC School, Billingham.
